

UV Finish Shown Under Black Light

Lakeland Ultraviolet Paint (UV) Finish **Creates Brilliant Lighting and Flash to Any Finish**

Lakeland continues to be innovative in developing new patterns and finishes. Now our blades and spoons are available with Lakeland's New Ultraviolet Paint. UV finish adds greater visibility for fishing components in deep or dark waters. UV creates a brilliant light and flash attractant when exposed to black light or UV energy. Unlike fluorescent glow finishes, UV (phosphorescent) does not require charging or recharging to make them visible. The UV finish can be added to any paint, fluorescent, or plate combination to make your fishing components unique.

Exclusive Lakeland Features:

- Compatible with all Lakeland color paints
- Illuminate all fluorescent paint colors
- Create special effects which are only viewable under ultraviolet light
- Durable protective coating

At Lakeland, manufacturing the finest quality spinner blades, casting spoons and trolling spoons for the fishing tackle industry is our only business. Lakeland is one of the largest manufacturers and continues to offer more choices of size, pattern, shape, finish, paint, and custom application than any other lure component manufacturer.

Lakeland customers expect the best service in the industry and we exceed their expectations with a commitment of continued innovation. Be sure to contact Lakeland to meet your fishing tackle component needs.
